Why Metaverse is Important

Typical Applications of Metaverse

Digital Human

XR Interaction

Digital Twin

...

Digital Human:

- ✓ Virtual idols innovate new forms of entertainment
- ✓ Digital employees reduce labor costs

XR Interaction:

- ✓ Cloud tourism to achieve remote immersion experience
- ✓ Virtual lab to realize 3D vivid teaching
- ✓ AR models help medical efficient diagnosis

Digital Twins:

- ✓ Smart city
- ✓ Plant management
- ✓ Fine design

...

Why Standardization is Important

Manufacturers

- ❑ **Serious homogenization competition**, lack of progress direction and excellent benchmarking reference
- ❑ **No unified interface between technologies**, many products and platforms cannot be connected

Clients

- ❑ **No selection reference**, slow user experience improvement speed
- ❑ **Difficulty to circulate user's identities and assets between platforms**

Industry Research

To sort out the development of metaverse enterprises and products, make the **industry atlas and white paper**, which has been **widely cited by many well-known securities and consulting institutions**, arousing wide attention.

2020 White Paper on Digital Human

2022 Artificial Intelligence Generated Content (AIGC) White Paper

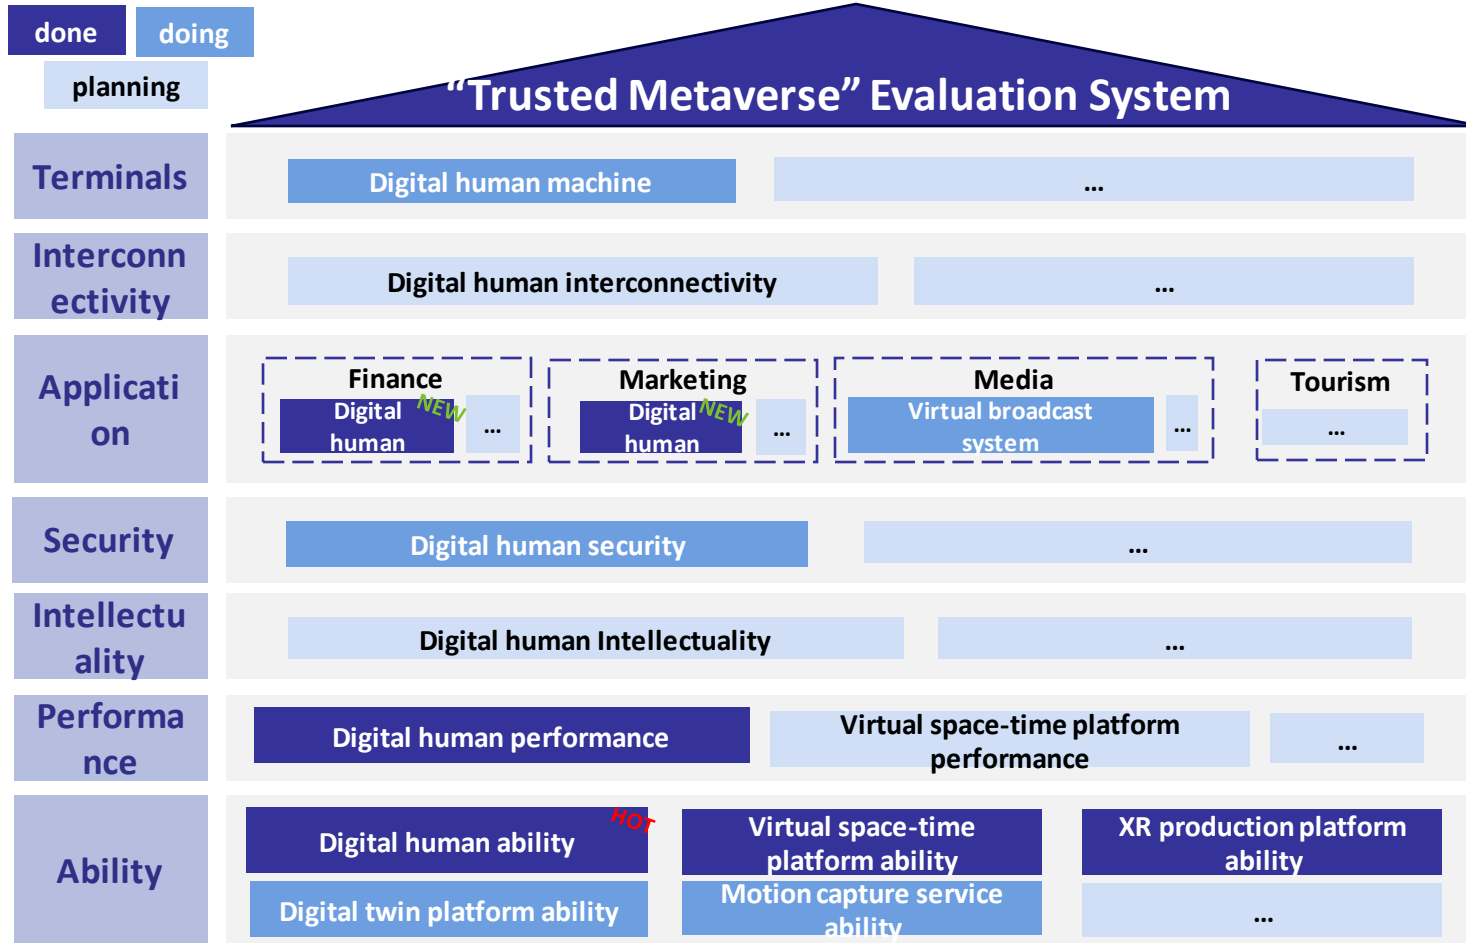

2022 Metaverse Industry Atlas v1.0

2023 Metaverse Industry Atlas Research Report (to be released)

“Trusted Metaverse” Evaluation System

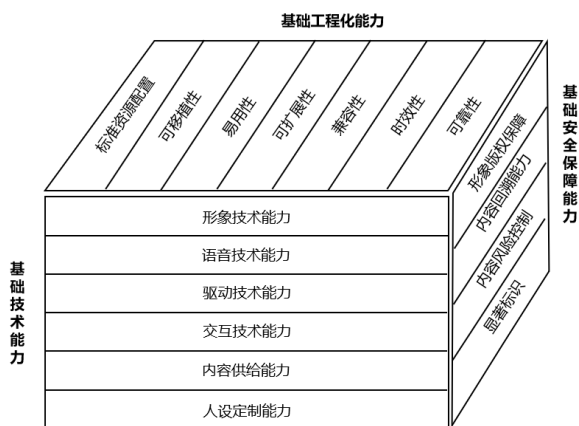

Since 2019 stepping into metaverse related work, we gradually established the “Trusted Metaverse” Evaluation System, widely recognized by the industry, **provides the reference for the technology providers, and the selection standard for application demanders.**

Released Evaluation Project

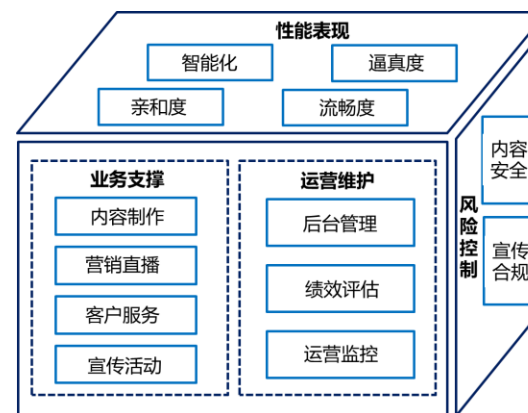

Digital Human Series

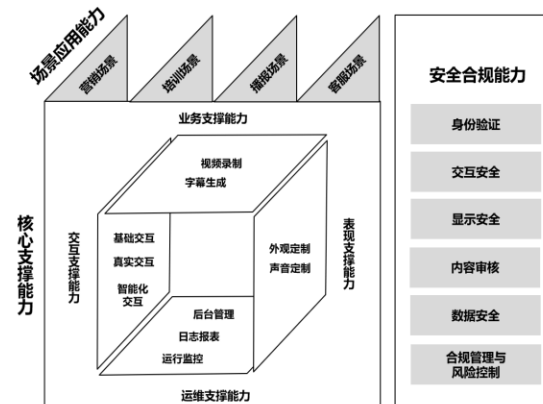

Basic Ability

Performance Classification

For Marketing

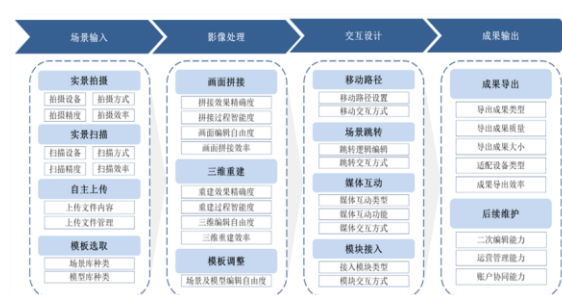

For Finance

Virtual Space-Time Platform

XR Production Platform

Two rounds of evaluation completed

The third round in progress...

More Evaluation Specification in Plan

1

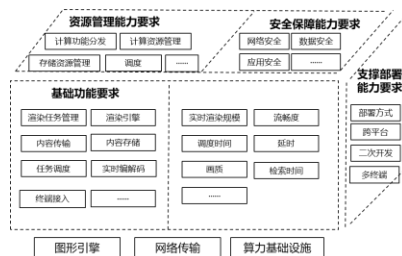

Digital Human Security

2

Digital Human Machine

3

Cloud Rendering

4

Virtual Broadcast System

5

Digital Twin Platform

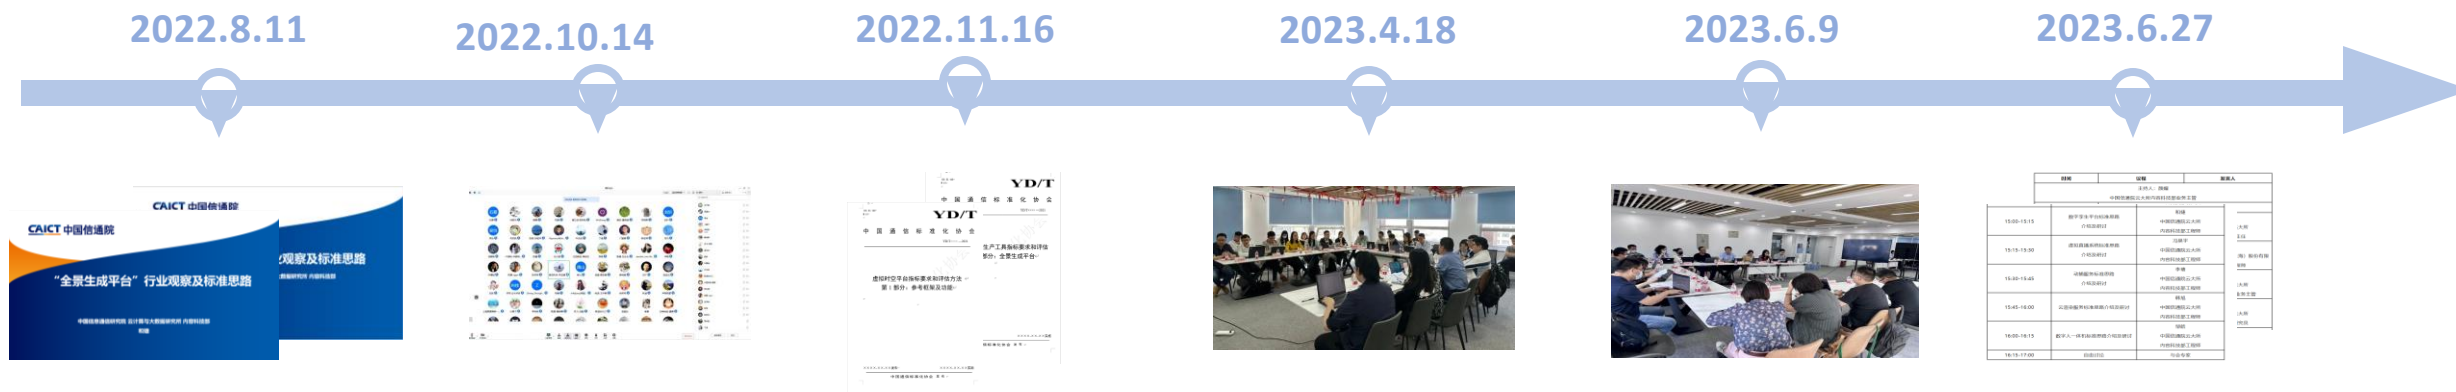

6

Motion Capture Service

Technical Salons and Standard Seminars

Organize large-scale salons and seminars **six times**:

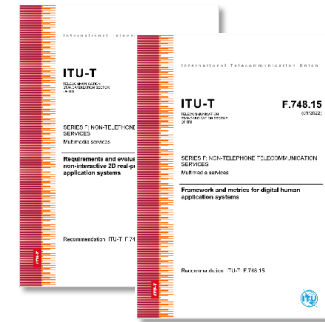

Attract **hundreds of enterprises** to actively sign up and give topic presentations:

Cooperation with the United Nations International Telecommunication Union (ITU)

By the **International Group of The Metaverse Innovation and Exploration Alliance**, deeply supported the work of ITU international standards, deeply participated in the activities of **ITU-T Metaverse Contact Group** and **ITU-T FGMV Metaverse Focus Group**, responsible for the domestic and international industrial docking and standardization needs.

✓ Successfully released the **world's first two international digital human standards**

✓ Support the focus group's **first meeting** held in Riyadh, Saudi Arabia, in March 2023

Work Plan in the Future

Organization and Operation

- Plan **working meetings**
- Refine contents of the working groups further

International Communication

- Connect closely with **ITU-T Metaverse Focus Group and contact group**
- Organize focus group meetings and international seminars
- Export excellent cases, technical reports and draft standards internationally

Technical Research

- Broaden **standard research** in other areas of the metaverse
- Carry out large-scale evaluation and testing
- Publish **research reports and white books** on core technology and industry

Active Industry

- Hold **metaverse technology salons, competitions, industry summits, and other international communication activities**
- Collect and publish the **catalogue of excellent products, typical application cases and scenarios in metaverse**
