

The Reference Architecture of Industrial Metaverse

Dr. Cheng CHI

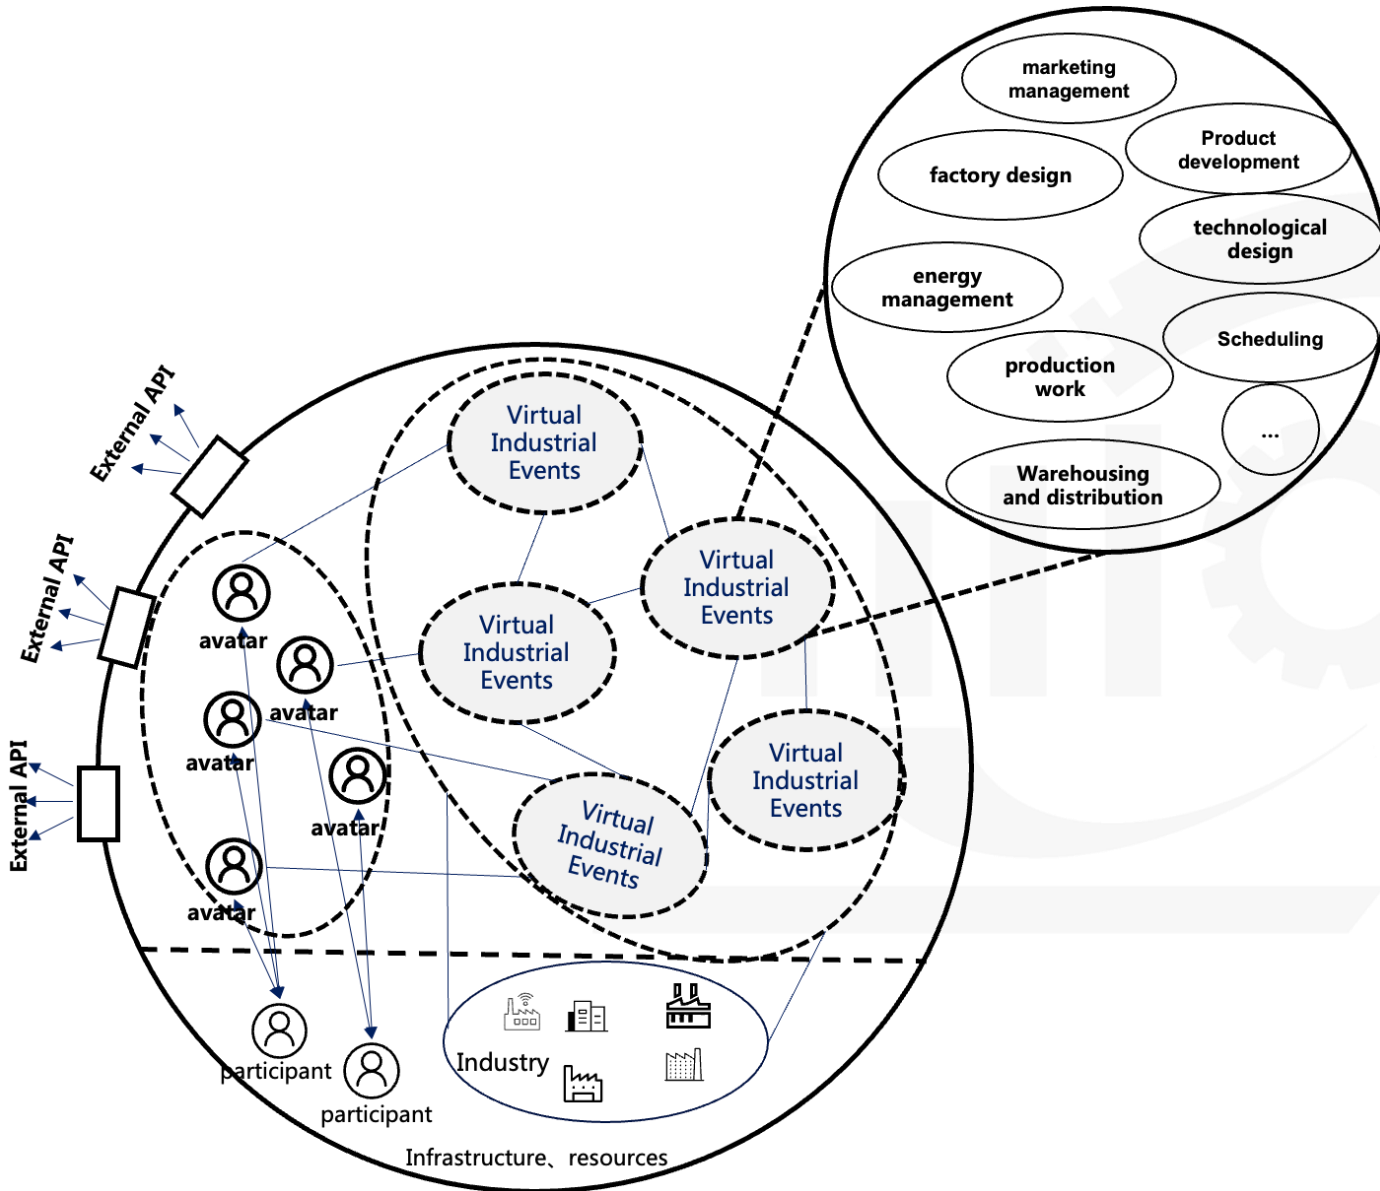

2023.07

A vital development field of the Metaverse

- The industrial metaverse is the landing and expansion of the metaverse in the industrial field.
- The industrial metaverse is a typical representative of the development direction of the metaverse from reality to virtual.

Overview of Industrial Metaverse

➤ Real-world

- ◆ The foundation of the Industrial Metaverse, including participants, infrastructure, and other resources.

➤ Virtual world

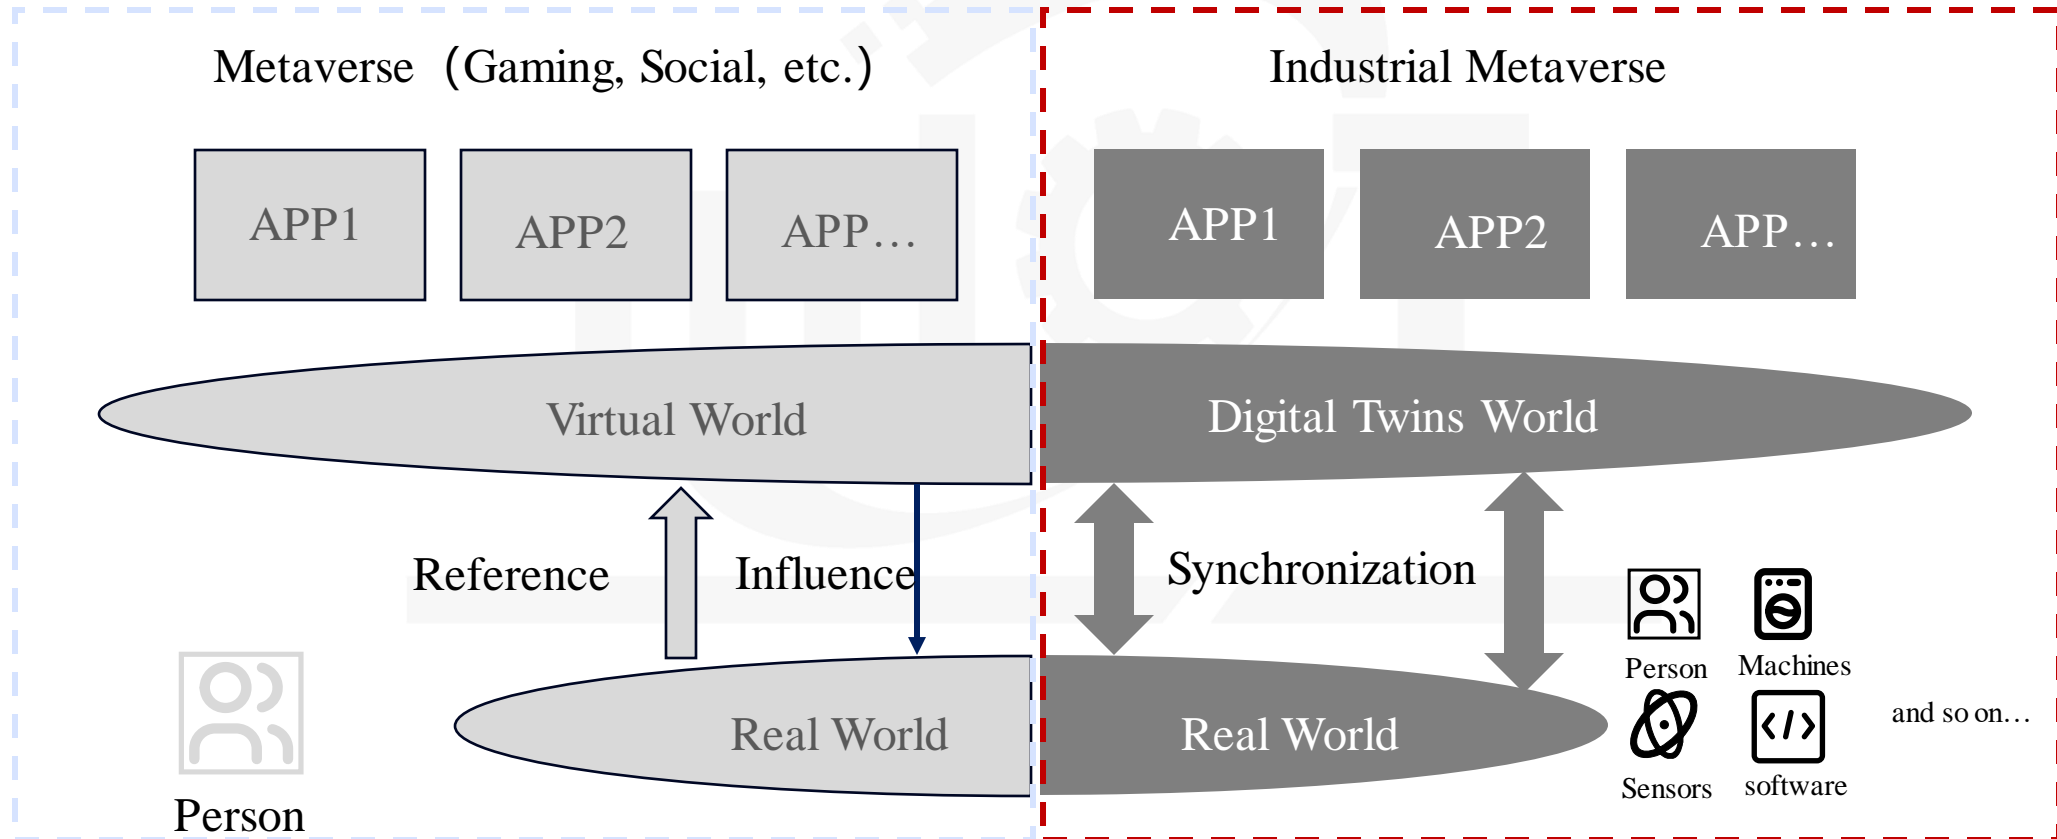

- ◆ Virtual Industrial Events: Digital twins from the real world
- ◆ Avatar: Carrier of digital identity and digital assets
- ◆ Extended API: Interface with other metaverses

Industrial Metaverse needs to comply with the real world fully

1. Created virtual world
2. APP that enhances user experience
3. Connecting people

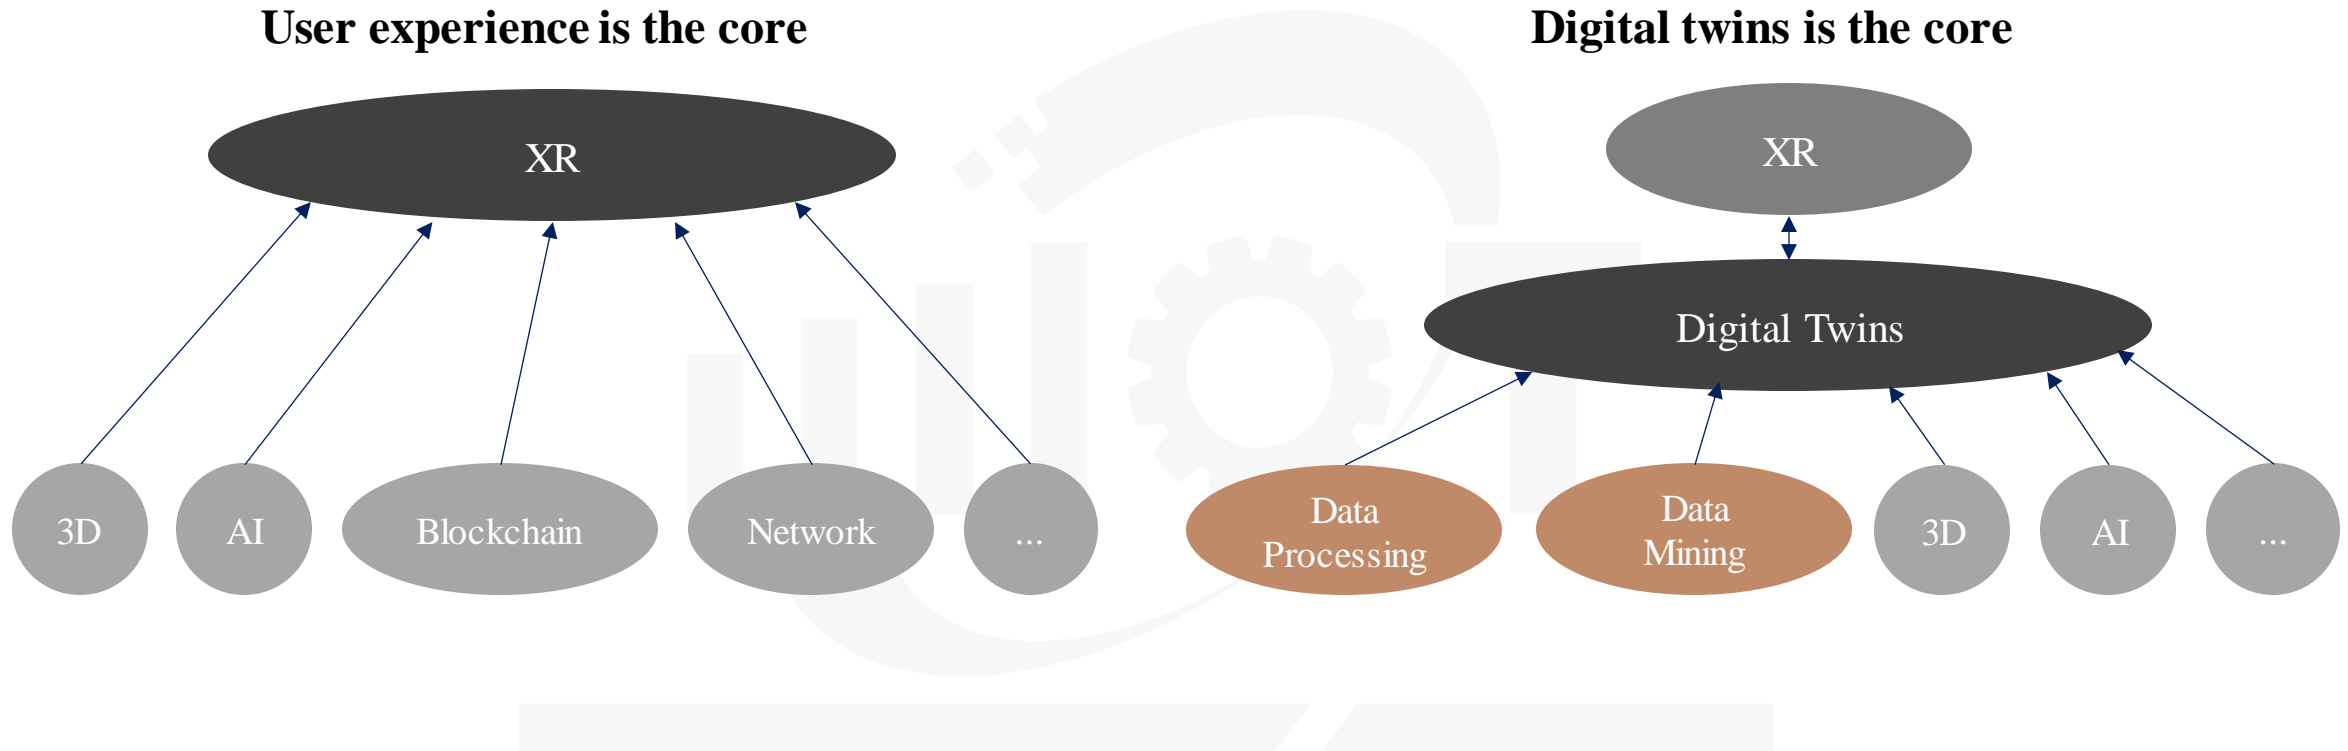

Diff.

1. Highly consistent with reality
2. App that solves industrial problems
3. Connecting people, machines, software...

The key technology of Industrial Metaverse is based on digital twins

- XR defines the form of the metaverse, but digital twins are the key to the industrial metaverse.

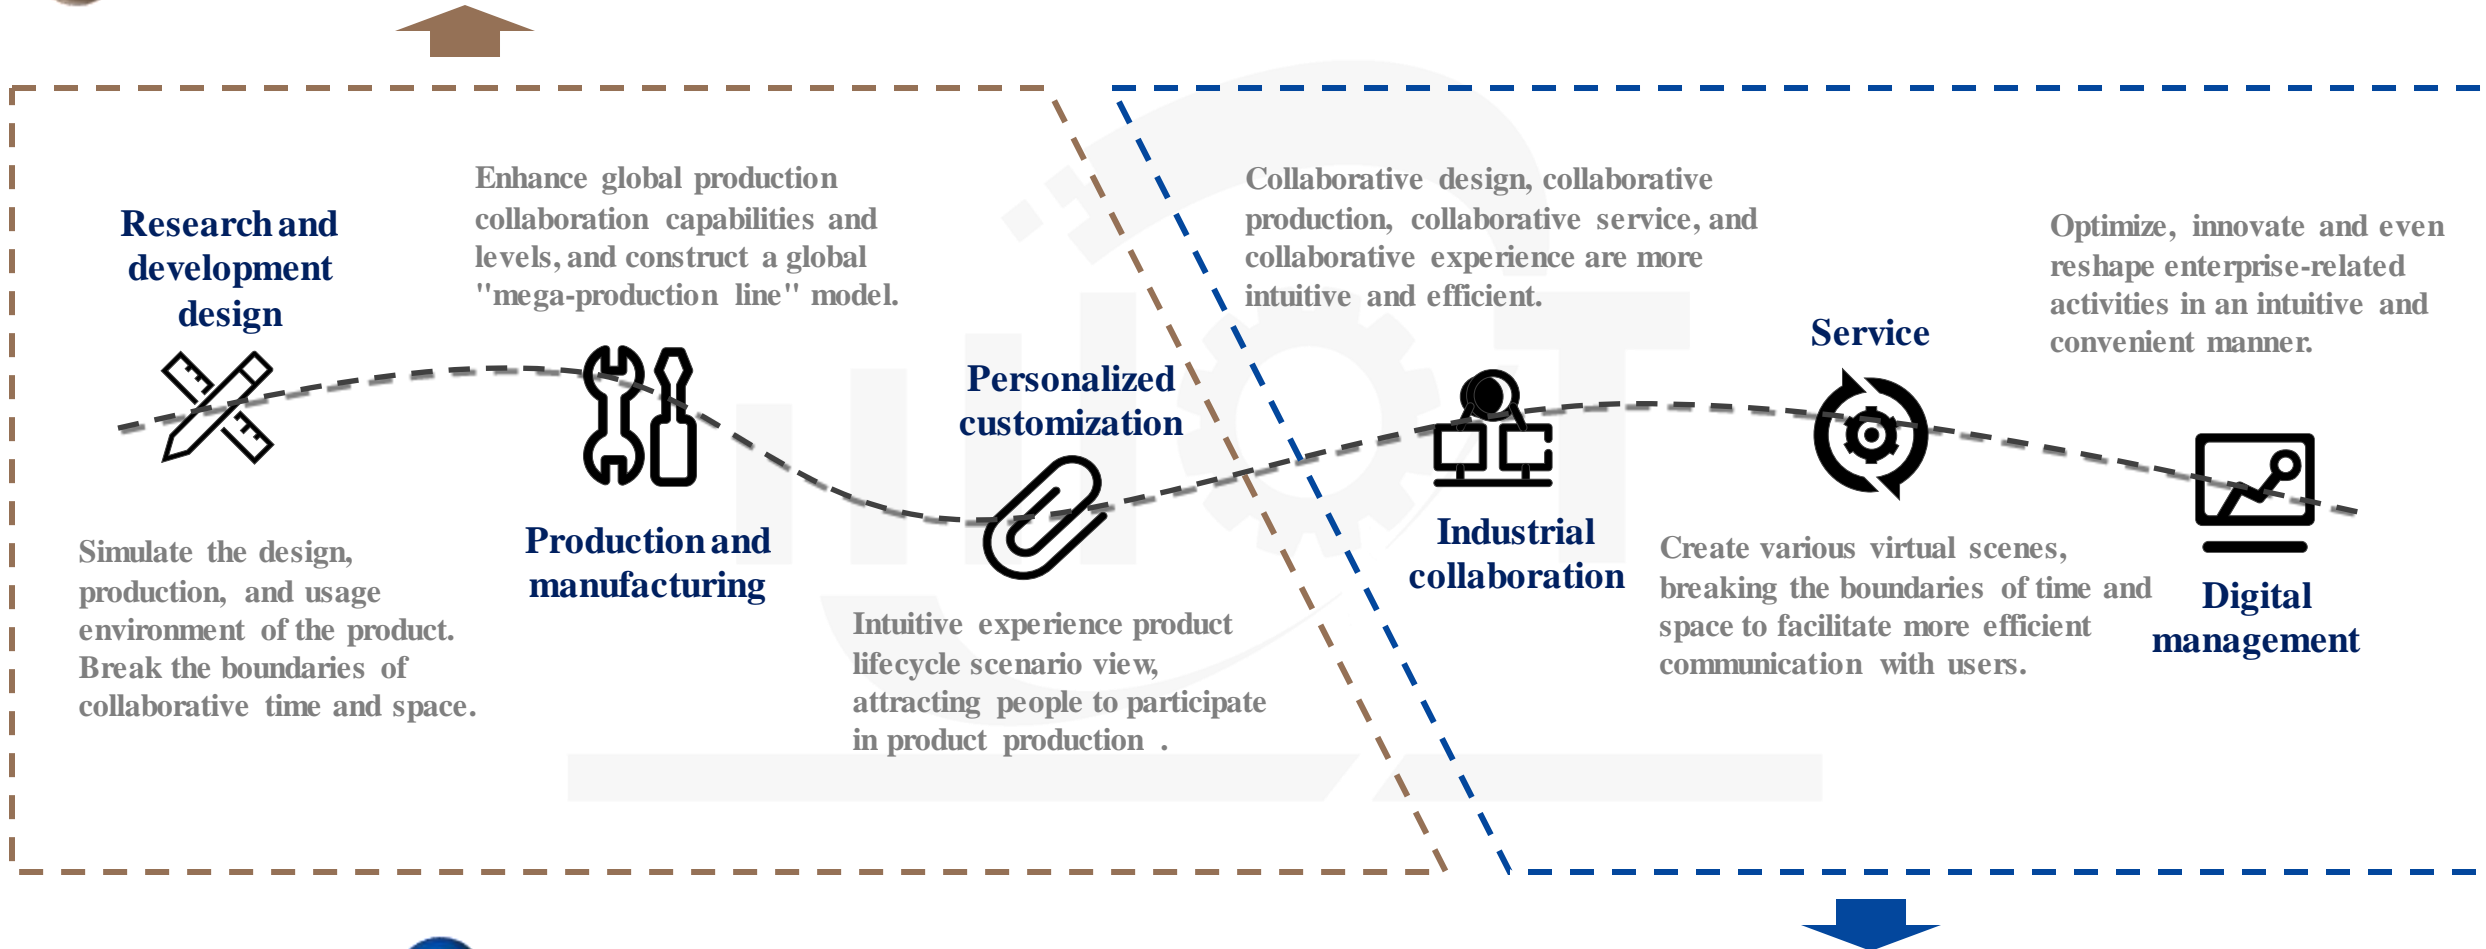

- XR is the most important technology, all technological applications are aimed at improving user experience.

- Digital twins is the most important technology, all technological applications are aimed at solving the industrial problems.

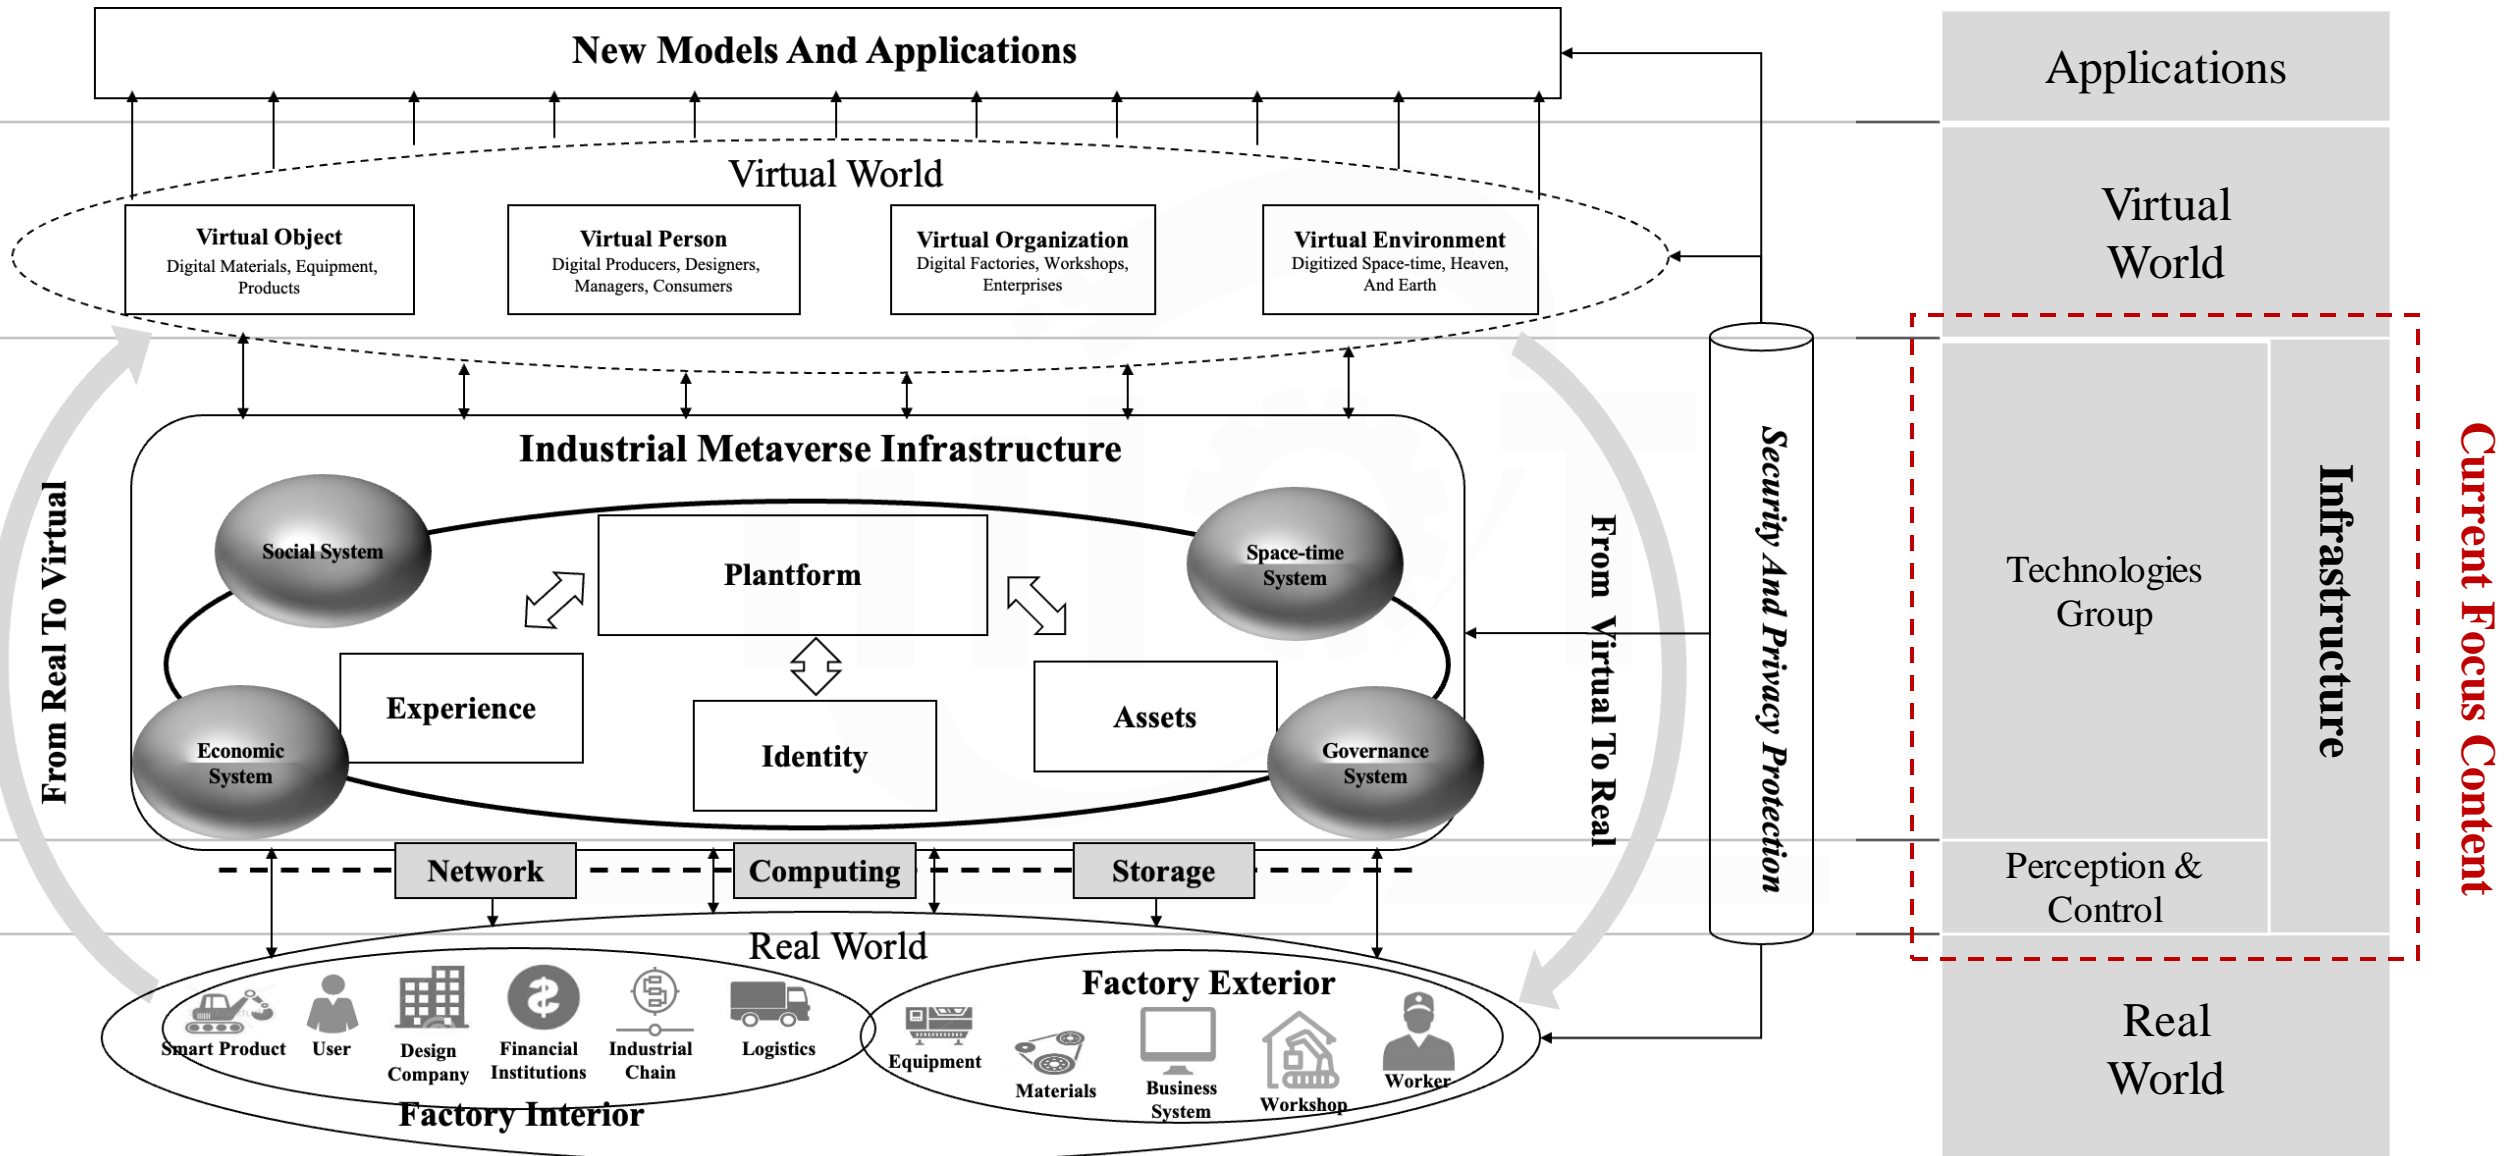

The significance of the Industrial Metaverse

1 Production gradually achieves spatialization of design and globalization of production.

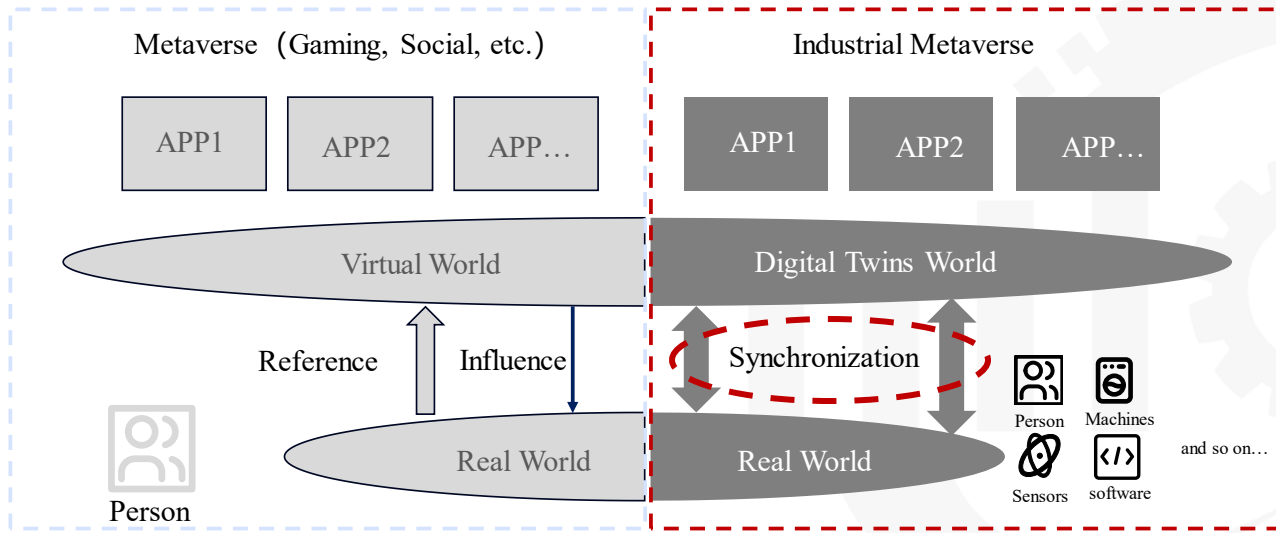

2 The management service system gradually achieves efficient management and diversified services.

((())) The Framework of Industrial Metaverse

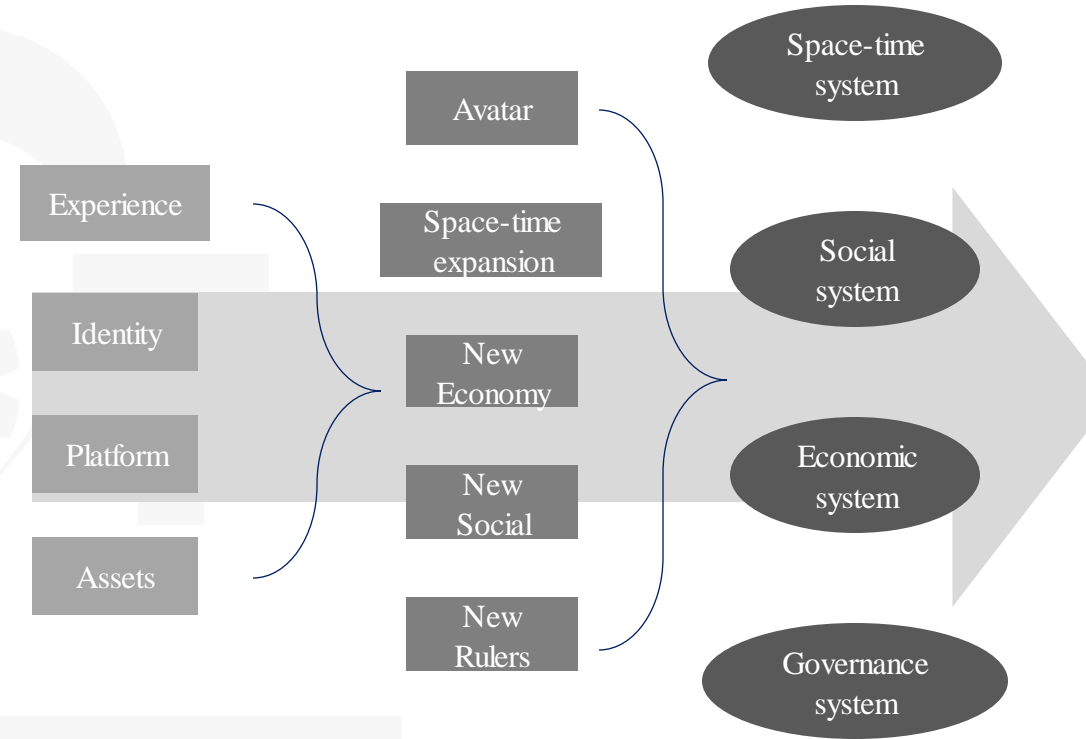

((())) The Infrastructure of Industrial Metaverse

➤ Perception and control

➤ Technologies Group

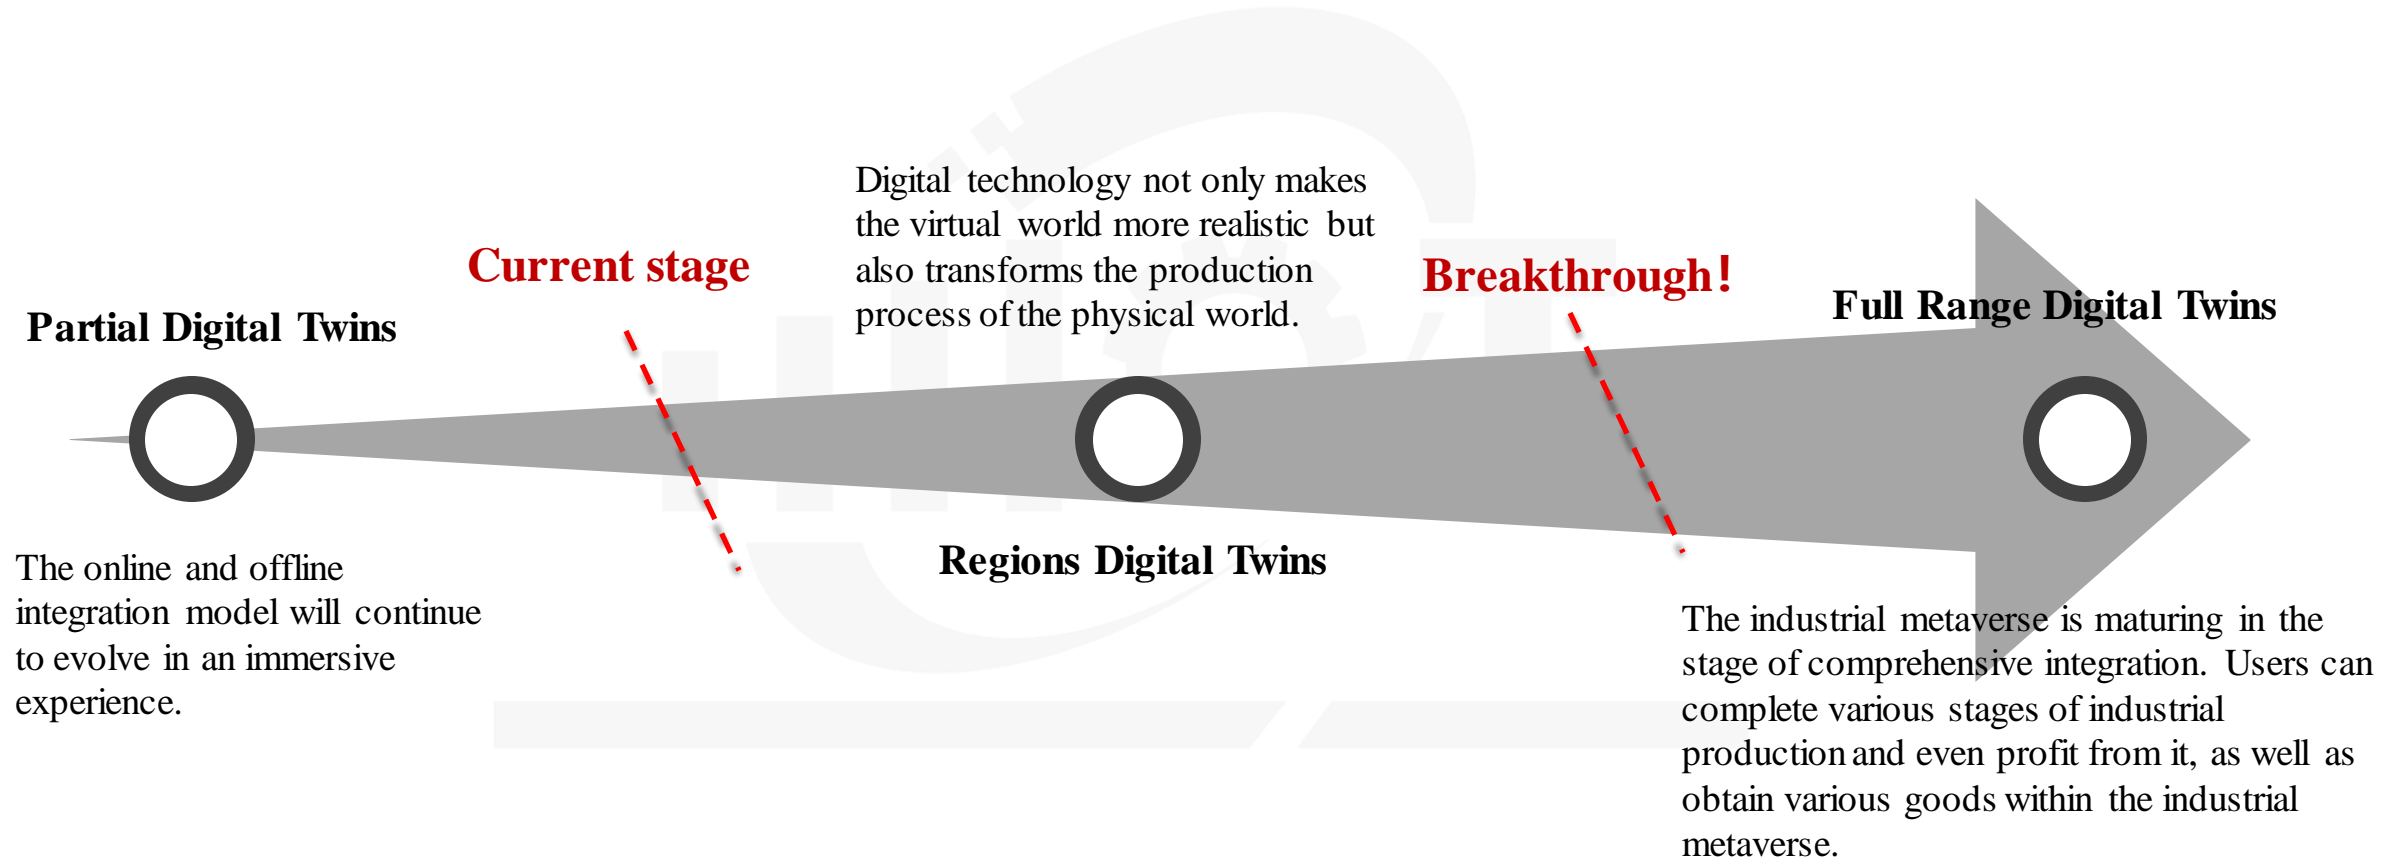

The industrial metaverse focuses on perceiving and controlling the real world.

- The virtual world can promptly sense events happening in the real world.
- The real world can promptly receive feedback from the virtual world.

By comprehensively applying experience, identity, platform, and asset systems, form the spatiotemporal system, social system, economic system, and governance system .

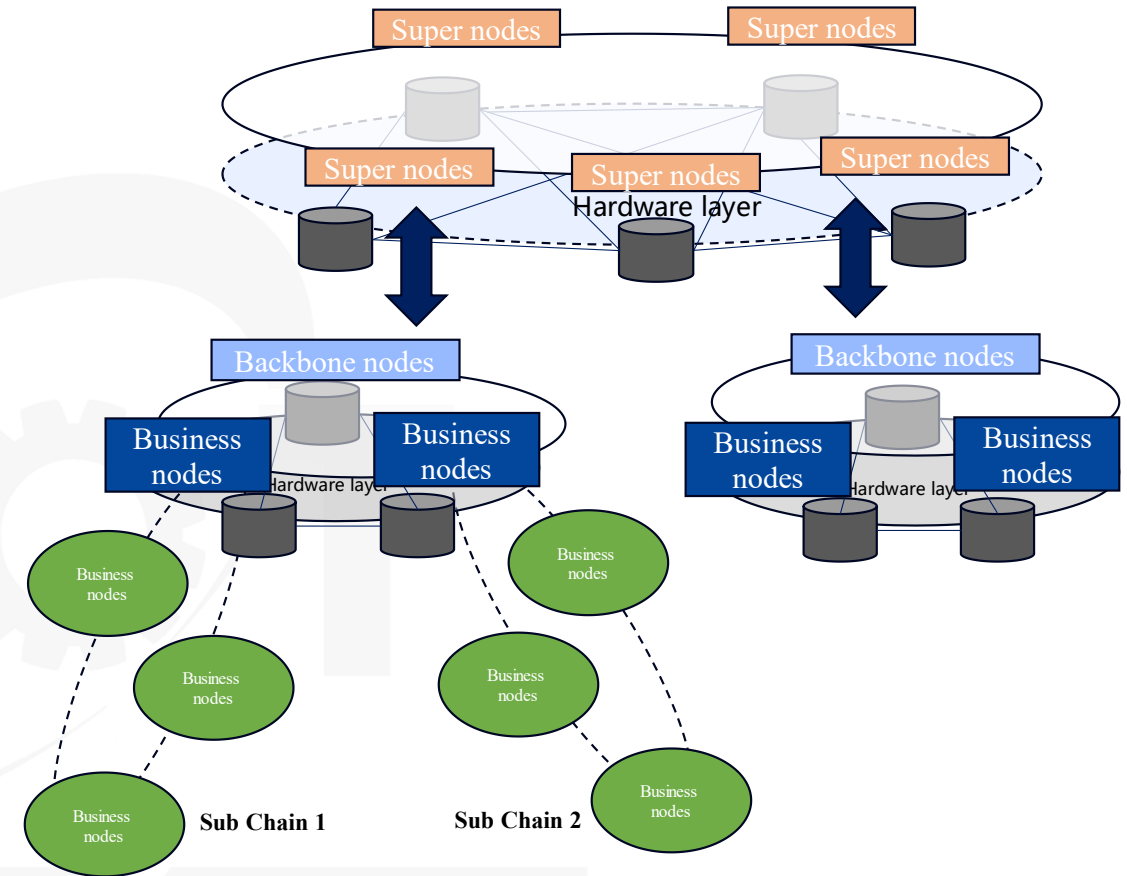

((())) The trend of Industrial Metaverse

- According to the level and scope of combining virtuality and reality, it can be divided into **Partial Digital Twins, Regions Digital Twins, and Full Range Digital Twins.**

- The Industrial Metaverse is still in the stage of **Partial Digital Twins** and moving towards **Regions Digital Twins.**

- FG-MV-I006 Technical Report
 - ◆ The Reference Architecture of Industrial Metaverse is under development.
- Spark Chain Infrastructure
 - ◆ To provide underlying support for digitalizing industrial identity and assets, plans are underway to establish a foundational network covering the entire globe.
- Application Exploration
 - ◆ In the future, typical scenarios in industrial production, such as steel, cables, ships, and other industries, will be explored to implement the Industrial Metaverse.

Based on licensed public permission chain technology and distributed identity technology, the Spark Chain Network is built as a new infrastructure to provide functions such as multi-identity fusion management, digital identity, and public data sharing for individuals, enterprises, devices, and digital assets.

*We welcome your participation in Industrial
Metaverse standard development!*
